

User Manual for University of Hamburg Wireless Network „GUEST“ Version 2.0

1. Requirements

If you want to use the wireless network of the University of Hamburg (SSID "GUEST") it is necessary to configure the following parameters.

- You have to configure your network connection to **get an IP-address automatically via DHCP**, this is the standard setting of many operating systems.
- For Internet access you have to customize the **proxy server** settings of your browser. Please use the **direct connection to the Internet**. You have to disable explicit proxy server settings and also the automatic proxy server setup.

2. Login

You have to connect to the wireless network of the University of Hamburg with the SSID „GUEST“. Please select this network from the list of the available networks and establish the connection.

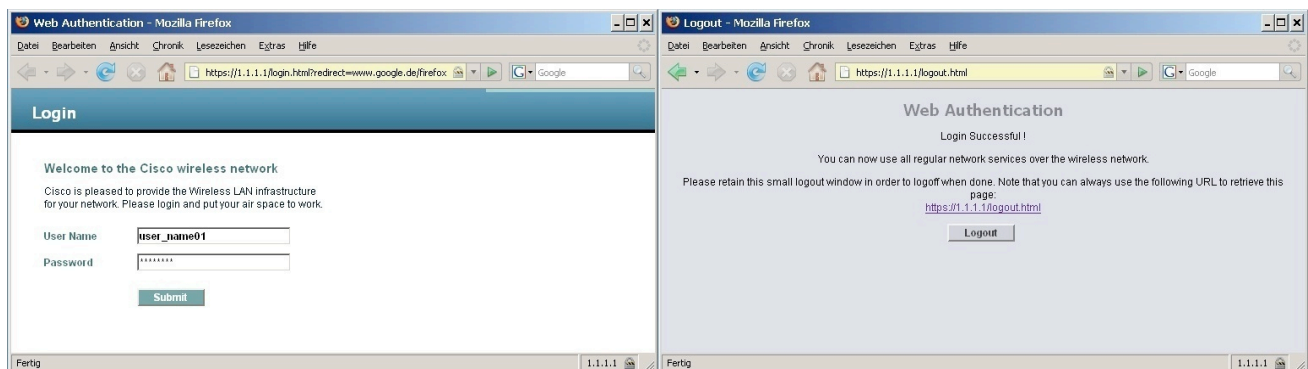

Fig. 1a: Login

Fig. 1a: Logout

Start your browser and try to connect to an Internet page. You will be directed to the GUEST login page (Fig. 1a). Here you have to fill in your user name and password. After successful login you can connect to any Internet page. The protocols http, https and ssh are supported by the guest login.

3. Logout

As user of a guest account you have the possibility to logout from the connection before being disconnected automatically (see below). Please visit the page <https://1.1.1.1/logout.html> and press the button „Logout“ (Fig. 1b). A message to confirm the successful logout will appear .

4. Logout automatically

The connection to the wireless network "GUEST" will automatically close after 120 minutes regardless whether the connection is in use or idle. Therefore, if you want to use the connection for more than 120 minutes you have to log on again.

The behavior after automatic logout is different for Microsoft Windows and MacOS-X. In the case of Microsoft Windows you will be directed to the login page when you are trying to connect to an Internet page after automatic logout occurs. After renewing your login by typing in your user name and password again you are able to use the connection as before.

When you are using MacOS-X the login page will not automatically appear if your are trying to connect to an Internet page after automatic logout happens. Here you have to disable the AirPort connection of your MacBook and enable it again. After this procedure you are able to log in again like before.
